Homework 12

Math 198: Math for Machine Learning

Due Date:
Name:
Student ID:

Instructions for Submission

Please include your name and student ID at the top of your homework submission. You may submit handwritten solutions or typed ones (LaTeX preferred). If you at any point write code to help you solve a problem, please include your code at the end of the homework assignment, and mark which code goes with which problem. Homework is due by start of lecture on the due date; it may be submitted in-person at lecture or by emailing a PDF to both facilitators.

1 Ridge Regression

Consider the linear regression problem in which we seek to fit weights $\mathbf{w}$ given data $\mathbf{X}$, $\mathbf{y}$ and a noise term $\epsilon \sim \mathcal{N}(0, \sigma^2)$. Suppose we have a prior estimate of our parameters' likelihoods; in particular, we assume $w_i \sim \mathcal{N}(0, c)$. Using everything you have learned in this course, derive the optimal values for $\mathbf{w}$ in terms of $\mathbf{X}, \mathbf{y}, \sigma^2$, and c.

Congratulations! You've made it to the end of the course. We hope you've learned a lot, and wish you the best of luck in future coursework!
